

CS 315-01 Project 04 Midterm

Cache Direct Mapped

1 word per slot
8 word cache

Slots

Memory

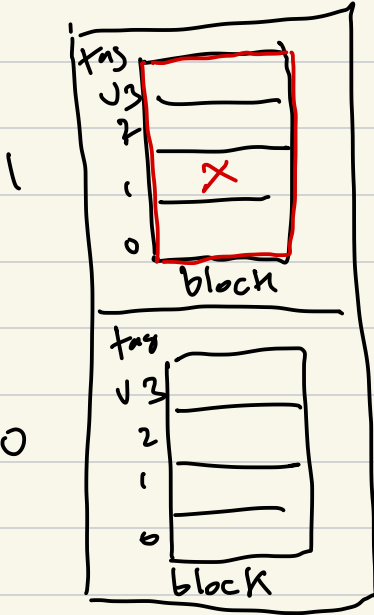

$$\text{slot} = \text{addr_word} \% 8$$

$$\text{slot_index} = (\text{addr} \gg 2) \& 0b111$$

DM Block Size = 4

Slots

addr

$$\text{addr_word} = \text{addr} / 4$$

$$\text{addr_block} = \text{addr_word} / 4$$

$$\text{slot_index} = \text{addr_block} \% 2;$$

block addr

$$\text{block_base} = \text{addr_void} - \text{block_idx}$$

Lookup DM 4

$$\text{slot_index} = (\text{addr} \gg 4) \& 0b1$$

Hit

$$\underline{\text{b_index}} = (\text{addr} \gg 2) \& 0b11$$

$$\underline{\text{b_index}} = (\text{addr} / 4) \% 4$$

Miss

We need to bring in entire block

Load block into slot

Determine block base

Loop 0 to 3

$\text{slot.block}[i] =$
 $\ast ((\text{uint32_t}\ast)(\text{block_base_byte} + (i \times 4)))$

$\text{slot.block}[i] =$
 $\ast (((\text{uint32_t}\ast)(\text{block_base_byte})) + i)$

return slot.block[b_index]

Direct Mapped 32 words 4 word blocks

$$32 / 4 = 8 \text{ slots}$$

$$0b1111 == 0xF$$

addr

$$b_index = (addr \gg 2) \& 0b11;$$

$$slot_index = (addr \gg 4) \& 0b111;$$

$$block_base_byte = addr \& n(0xF)$$

Question 2

Fix 1: line

Question 3

Why 20 bit shift

Set Associative Cache

4 way set associative

8 words

4 ways

8 slots 8 word

Memory

WAYS

$$\text{set-index} = \text{addr_word} \% 2$$
